Wiring Instructions – Frensch F-21 Series Lights

1. Before making wiring connections, be sure the power is off at the source of power!
2. Connect YELLOW wire lead to switched positive DC voltage (+VDC). *Note: Switch is optional for touch switch equipped models 7610 & 7611, however touch switch illumination will be ON whenever power is present.
3. Connect BLACK wire lead to negative DC voltage (-VDC)
4. Connect RED wire lead to switched positive DC voltage (+VDC). *Note only models 7610 & 7611 are equipped with red nightlight color. This function is switch controlled only.
5. Ensure installation is completed in accordance with applicable standards, such as ABYC.
6. Turn the power to the circuit(s) on at the source of power & test F-21 light(s).

Wire Color	Function
Yellow	+VDC (*White Color)
Black	-VDC
Red	+VDC (*Red Color)
