

Side-Mount Engine Lever Control with Thruster Switch

OVERVIEW

This is the perfect accessory to simplify the operation of your bow thruster when backing down and the helmsman is facing aft.

Imtra offers the Engine Control Levers as a kit with our special Y-cable #61296 for the addition of auxiliary switching to a thruster system. This provides a plug-n-play connection and will utilize the Auto-Off function of the Side-Power control panel, so the thruster control function of the levers will shut off automatically after approximately six minutes of inactivity.

SLEIPNER

Side-Power

FEATURES

- 316 investment cast stainless steel
- Fits most single lever side mount controls like Morse Twin SR and Teleflex
- A MUST for Sportfish Yachts
