Warnings and risk levels

DANGER

Non-compliance with the instruction results in risk of severe or fatal injuries to persons

WARNING

Non-compliance with the instruction may result in risk of severe or fatal injuries to persons

CAUTION

Non-compliance with the instruction may result in risk of injuries or damage to equipment

NOTICE

Non-compliance with the instruction may result in reduced lifetime of equipment, malfunctions etc.

General information

Before installation, make sure to read and understand this installation and operating manual.

Observe national assembly and installation regulations.

Always contact the manufacturer if anything is unclear, or if you notice any faults on the product or in this document.

This installation and operating manual shall be available to anyone operating, installing, inspecting, modifying or repairing the equipment.

Safety

- To ensure that the product is used safely and to optimize its life time, the following instructions must be observed and adhered to.
- Only qualified personnel may install the product.
- Note that changes to the product and/ or installation of components which do not conform to the approval, may be a safety violation. The manufacturer will not under any circumstances be held responsible for such activity.
- For your health and safety, always use safety gear suited for the task.
- Be certain to follow codes, regulations and / or specific procedures that are related to the installation.
- The equipment shall be attached to a solid surface in a way suitable for the conditions of use.
- The lamp is sealed for life. Never open the sealed parts of the lighting fixtures.
- Do not use chemicals or caustic substances of any kind when cleaning.

Marking and intended use

The luminaire is not suitable for covering with thermally insulated material:

Do not stare at the operating light source:

Technical data

Property	Value
Material	Casted seawater resistant aluminium, chromated and powder coated, glass, EPDM gasket
Input voltage	200-240V AC / 24V DC (only 5000 lm)
Wiring in series 100-240 VAC, 16A B, circuit breaker	13 pcs lamps can be connected in series
Wiring in series 100-240 VAC, 16A C, circuit breaker	22 pcs lamps can be connected in series
Wiring in series 24 VDC	No through wiring possible due to the high current
Light output	5000 lm & 10 000 lm
Color temperature	2200K, 4000K & 5000K
Power consumption	5000 lm: max. 35W & 10 000 lm: max. 70W
Ingress protection	IP66/IP67
Weight 5000 lm	Approx. 6 kg with mounting bracket
Weight 10000 lm	Approx. 7 kg with mounting bracket
Mounting	Mounting bracket with hole pattern for different options
Cable entries	1x M25 Phoenix QPD quick installation plug for cables up to 2,5mm ² 1x M25 stopping plug
Surge protection	LED driver: Differential Mode 6kV, Common Mode 10kV
Operating temperature	- 40°C...+55°C
Light distribution	Narrow, Medium & Wide
Light source	LED
Lifetime	Load 80% > 120 000h

Product description

LED Floodlight made of high quality, sustainable materials including seawater resistant aluminium and glass front. Maintenance free with a plug and play plug for fast and easy installation. The small and modern design makes it excellent for use for area lighting on smaller ships.

Transport and storage

- Transport and store the equipment only in the original packaging
- Store the equipment in a dry and vibration free place
- Do not drop!

Tools required for installation

Regular tools required for installation:

Tools for mounting the mounting bracket to the surface: A wrench

Tools for mounting the bracket to the lamp: A size 13 wrench

Mounting and installation

DANGER

Incorrect mounting and installation may lead to risk for falling objects, risk for electric shock or fire and risk for equipment malfunction. In turn, this can lead to severe damage and/or injuries.

Preparation

- Make sure you read the whole manual before starting the installation.
- Check whether the fixture is to be installed in an environment that meets the ambient temperatures.
- Remove the fixture from the package and check it for mechanical damage.
- Ensure that the surface where the fixtures are to be mounted on is flat.

Only qualified personnel are allowed to perform installation and maintenance tasks to this product. The equipment is ready for installation when leaving the production facilities of R. Stahl Tranberg AS. Please check the condition of the equipment and any other contents in the box when unpacking. Any damage done to the equipment during transportation is not the responsibility of R. Stahl Tranberg AS. If the content is not complete, please file a claim to the manufacturer immediately.

The TEF 2580 is delivered with a mounting bracket.

Any damage caused by the use of an incorrect combination of cable and cable glands is not the responsibility of R. Stahl Tranberg AS and is not covered by the warranty.

Mounting

If the lamps are not electrical connected at the installation time, make sure that the QPD plug are properly sealed by a sealing plug (or a protective cap) for unused cable entries IP68 (part no 50500231). **See figure on next page.** If this is not done the lamp will not be protected against water intrusion. The lamp comes with a sealing plug installed.

When the lamp is ready for electrical connection remove the sealing plug and connect the cable to the QPD plug. After properly mounting of the cable and the plug, the deck light has an IP66/67.

The mounting bracket is packed inside the box with the luminaire.

Electrical connections

Only qualified electrical personnel may install and start up the QPD components. For correct electrical termination, please follow the Phoenix user manual, Appendix 1 in the end of this document. Below is an excerpt of the Phoenix user manual describing the main points of the procedure.

Important!

Be sure to install the cable in a way, which prevents water to penetrate into the enclosure through the connection plug. Always let the cable bend downwards from the cable gland to prevent water to sip in with the cable. See illustration below. The illustration is showing another type of lamp, but the principle is the same.

Also make sure to use the correct QPD Plug connector size (according to the cable diameter) when you install the luminaire.

Cable termination

- Cable diameter: Ø9-16mm
- Wire cross section: 1.0mm² to 2.5mm².
- Wire diameter incl. insulation: 2.0mm to 3.80mm.

Connections

1. Strip approx. 60mm off the cable.
2. Loop the PE conductor around the live conductors (1). As a result, the PE conductor will be pulled out of the terminal block last if strong tension is exerted on the cable.
3. Insert the cable into the terminal nut.
4. Fix the wires in the conductor support of the splice body (2).
5. Cut off the wires with a diagonal cutter flush on the splice body (3).
6. When connecting the terminal nut to the light connector socket, make sure that their markings are aligned.
7. Screw the terminal nut together with the light connector socket (4). For this, we recommend using either the socket wrench, a wrench, or a plier. Screw the terminal nut as far as it goes, or with the specified torque. It must not be possible to unscrew the terminal again by hand.
8. **Seal off any non-allocated connections using a protective cap or a sealing plug.**

Ground bounding screw

The floodlight is equipped with a ground bounding screw which can be used as grounding where national or company regulations require it.

QPD plug information (for more details see Phoenix QPD original datasheet)

Wrench size, union nut	27 mm
Tightening torque, union nut	10 Nm
Tightening torque, counter nut	5 Nm
Wrench size, counter nut	30 mm
Numbers of connections	10
Conductor cross section flexible min.	1 mm ²
Conductor cross section flexible max.	2,5 mm ²
Conductor cross section solid min.	1 mm ²
Conductor cross section solid max.	2,5 mm ²
Conductor cross section AWG min.	16
Conductor cross section AWG max.	14
Dimensions of slip-on connection	4.8x0.8 mm
External cable diameter	9 mm ... 16 mm
Position marking	1, 2, 3, N, PE
Quickon connectability	Max 10
Insertion/ withdrawal cycles	Max 50

DALI version

The QPD plug is marked with symbols for termination on the round surface at the lower end of the plug.

Cable (conductor cross section flexible: min. 1mm² & max 2,5mm²)

Cable diameter min. 9mm, max. 16mm.

5000 lm

10 000 lm

Options and spare parts

Image	Description	Part No
	Cable termination nut Ø6 - 11 mm	50500223
	Cable termination nut Ø9-16 mm	50091435
	Plug connector for cable Ø6 - 11 mm	-
	Plug connector for cable Ø9-16 mm	Digital output (Alarm output)
	Sealing plug 14x22 (delivered with the lamp)	50500231
	Protective cap for unused cable entries IP68 (to be ordered separately)	50500226
	Breather plug M12 IP68	50091434
	Blind plug M25	50091436

Maintenance and cleaning

The floodlight should be inspected according to company routines.

- Do not clean the fixtures with a high-pressure steam or water jet. This could cause damage that is not covered by the warranty. Only clean by washing down with cloths / soft brushes, water and mild detergents. Avoid chemicals with high or low pH, abrasives, high pressure washer, strong detergents, solvents, petroleum- or alcohol based cleaning agents and similar. Avoid any corrosive media.
- This is a sealed product safe for water intrusion if it is not used pressure steam or water jet directly on the lamp. The manufacturer still suggest regular check for water intrusion in the housing.
- When cleaning, use only mild detergents. Alcohol or petroleum based products may damage the sealing.

Disposal

CAUTION

This equipment or part of this equipment is considered EE-Waste, and shall be handled accordingly

- Observe national and local regulations and statutory regulations regarding disposal
- Separate materials when sending it for recycling
- Ensure environmentally friendly disposal of all components
- No component or packaging shall end up in the ocean during any stage of the product's lifetime

Appendix #1

English

Installation instructions for the QUICKON installation system QPD

Different components are available. However, they are all connected in the same way (1):

- 1 Cable connector
 - 2 Combination of cable connector and panel feed-through
 - 3 Panel feed-through with connected cables
 - 4 Panel feed-through with spade connection
 - 5 QUICKON connector with QUICKON nut
 - 6 QUICKON nut
- H-distributors and T-distributors (see 2))

1 Safety note

Only qualified electrical personnel may install and start up the QPD components.

2 Assembly

- Strip approx. 60 mm off the cable (3).
- Loop the PE conductor around the live conductors (4). As a result, the PE conductor will be pulled out of the terminal block last if strong tension is exerted on the cable.
- Insert the cable into the QUICKON nut.
- Fix the wires in the conductor support of the splice body (5).
- Cut off the wires with a diagonal cutter flush on the splice body (6).
- When connecting the QUICKON nut and QPD component, make sure that their markings are aligned.
- Screw the QUICKON nut together with the QPD component (7). For this, we recommend using either the socket wrench QSS..., a wrench, or a pliers. Screw the QUICKON nut as far as it will go, or with the specified torque. It must not be possible to unscrew the QUICKON nut again by hand.
- Seal off any non-allocated QUICKON connections using a protective cap.

QUICKON connector

The QUICKON connector is connected as described. It is equipped with a capacitive PE contact, polarized to prevent mismatching, and features touch-proof protection according to DIN EN 50274.

WARNING: Always de-energize the connector before connecting or disconnecting it.

3 Dismantling

WARNING: Only detach the cable when it is de-energized.

- To detach the cable, completely unscrew the QUICKON nut (loosening torque 5 Nm).
- Hold the panel feed-throughs of type QPD W ... with a wrench.
- Pull out the splice body without using a tool.

4 Reconnection

- The QUICKON connection may be rewired up to 10 times maximum with the same conductor cross-section. For this, you must cut the cable and re-make the connection from scratch.
